

WEST MAUI WAVE RUN-UP FORECAST VALIDATION

A combination of high water levels and large wave swells has caused coastal erosion, damage to infrastructure and properties, and land-based sedimentation along West Maui's shoreline. In order to enhance preparedness for such events, PacIOOS is developing a six-day, high-resolution wave run-up forecast for West Maui.

pacioos.org/wm

A six-day wave run-up forecast for each of the eleven domains will be developed to increase preparedness.

We need your help!

To determine thresholds and levels of impact for each of the 11 domains, we need your support:

- Take photos around peak tides or swells, OR anytime waves overtop beach features
- Capture maximum extent of swash, or highest wetline, if possible
- Include comments if you recognize any impact or damage
- Submit photos from your phone OR computer

All photos can be viewed on the West Maui Map: at pacioos.org/wmm
